Quick measure

🔴 1. Contract Type is the strongest driver of churn
Customers with **Month-to-Month contracts** show the highest churn rate compared to long-term contracts.
This indicates that lack of commitment significantly increases customer churn.

🔴 2. New customers are the most at risk
Customers within their **first 12 months** have the highest churn rate (~50%).
This highlights the importance of improving the onboarding experience.

🔴 3. Electronic check users churn more
Customers using **Electronic check** as a payment method have a noticeably higher churn rate than other payment methods.
This may indicate friction or dissatisfaction in the payment experience.

🔴 4. Lack of Tech Support increases churn
Customers without "**Tech Support"** are significantly more likely to churn.
Providing support services appears to improve retention.

🔴 5. Online Security impacts retention
Customers without "**Online Security"** show higher churn rates, suggesting that value-added services improve customer loyalty.

🔴 6. Streaming services have limited impact
Services like "**Streaming TV"** show relatively smaller differences in churn rate, indicating they are not primary drivers of churn.

🟢 Business Recommendations
- Encourage customers to switch to long-term contracts through discounts
- Improve onboarding experience for new customers
- Promote "Tech Support" and "Online Security" bundles
- Investigate and optimize the electronic check payment experience
